

INNOCULATION

3 WEEKS

4 WEEKS

5 WEEKS

AFTER 45 DAYS

AQUA-CLEAN

The hog farm lagoon system located in South Korea was completely crushed over prior to inoculation with Aqua Clean. The covering was approximately one inch thick. Aqua Clean was applied to the system with a standard usage rate .

Within 3 weeks, the solid covering was broken apart and after 4 weeks was dissolved into slurry form.

After 5 weeks, most floating solids had disappeared, and after only 45 days, no solids were visible. The lagoon was stabilized and functioning properly.

All odors were eliminated and BOD was reduced by 70%
