Bean trial with the use of BioActive Plant Strengthener

AT VIC WATT'S FARM – BONNAROAD, BUNDABERG
TRIAL RESEARCH BY PAUL BRIFFA AND CLEVE WOOD

The bean trial was started in mid-April 2001. The ground was prepared with BioActive Plant Strengthener 2 weeks prior to planting. The bean seeds were coated with BioActive Calcium Carbonate Plant and Crop Strengthener and then planted. They were sprayed with BioActive 3 weeks later and again 2 weeks after that.

98% strike rate was achieved with only two seeds failing. The photograph below shows crop at 7 weeks laden with flowers and beans. The BioActive treated beans show:

- (1) Large healthy leaf growth
- (2) Strong resilient stems
- (3) Large amounts of flowers and beans
- (4) Good even crop overall
