

# BioAktiv for plants

use in

## winter oilseed rape

Josef Hložek, Chotětov (Czechia) 2011/12

Sown: Total area 400 ha

Treated with PlantAktiv (BioAktiv for plants): 350 ha

control area: 50 ha

Standard agricultural procedures were followed. However, in addition, PlantAktiv (BioAktiv for plants) was applied which, on fields considerably weakened by black frost, contributed to a yield being achieved here similar to that achieved on our areas protected by snow.

PlantAktiv (BioAktiv for plants) proved to be excellent both in association with hybrid strains and standard species. The root system was strengthened significantly, plants are better able to absorb moisture and nitrogenous fertiliser.

In the coming season we will once again be using PlantAktiv (BioAktiv for plants) with winter oilseed rape, also extending use to cover wheat and sugar beet.
