

Tomato: Better yield and healthier plants with BioAktiv

Fig. 1: Tomatoes produced in a greenhouse plantation in Southern France

Southern France [Nov 2007]: BioAktiv provided healthier growth and better yield, according to director of one of the largest tomato producers in the world.

The Plantation

The use of *BioAktiv for Plants* in a tomato plantation in Southern France of a world's largest tomato producer showed excellent results. The plantation grew tomatoes in a three-hectare greenhouse with a special soil-less hydroponic method (see Fig.2).

Applications

BioAktiv for Plants at a dosage of 1 kg per ha was applied every 14 days alternatively to the roots through the watering and fertilization system or spraying on the plant leaves and branches.

The Results

A director of the plantation commented that BioAktiv provides:

- Healthier plant growth
- Increase in resistance against fungi
- Higher yield
- Tastier fruits of more even in size

According to Boris Barth, spokesperson of BioAktiv GmbH, the plantation has been achieving 20% to 30% extra yield.
